Gilden. 1622.

A Prognostication, published for this yeare of our Lord and Sauour Iesus Christ,
1622.

Being the second after Leape yeare.

Wherein is set down according to Arte, an Astrologicall description of the likely seasons of the foure Quarters of the yeere.

With other fit matter conuenient for such a worke.

By G. Gilden. οὐρομαθη.

Ludit in humanis Diuina potentia rebus.

At London, Printed for the Company of Stationers.

To the Reader.

eeing (curteous Reader) that Prognostications & annuall Almanacks are commonly published for the vse and behoofe of the common people, I haue thought good for their better vnderstanding, to be as plaine therein as I might: and therefore haue written little in this Almanacke, and Astronomicall Tables, but what (with small paines euen of the simplest) may be easily vnderstood. But seeing the predictions of the weathers dispose, are commonly by the common sort taxed of vntruth; I haue (as formerly) thought good onely to set downe the Aspects of the Moone, and the rest of the Planets, for the iudicious to finde out of themselues: which being reduced into 12. Columes for the seuerall moneths, I haue set them in my Prognostication; seeing the Table annexed is much pertinent thereto. For the better vnderstanding whereof, and the like Tables; if any be desirous so to enrich his vnderstanding with Mathematicall knowledge, he shall find the workes both of ancient and moderne Writers so plentifull, as that there were neuer better, or neerer helpes, for the attaining thereof, then are at this present: as may well be proued by those excellent workes

To the Reader.

workes and inuentions, that haue lately been published; namely, the admirable Tables of *Logarithmes*, inuented and published by that Honourable Lord *Iohn Nepair*, Baron of *Mar-chiston*; and the excellent Table, called the *Arithmeticall Iewell*, inuented by Master *William Prat*, who teacheth the vse thereof in the City of *London*; which *Iewels* are made by Master *Robert Linborough*, at his House in the lower end of *Gutter-lane*, neere *Gold-Smiths Hall*.

There is also another excellent Ruler set forth, which performeth most of the conclusions that can be wrought either by the Globe or Sphere; and for gauging of vessels, it farre exceedeth all other Instruments: performing also in Arithmeticke all questions in Multiplication, Diuision, or the Extraction of roots; which Rulers, as also all other Mathematicall Instruments, are exactly made in wood, by my very good friend Master *Iohn Thomson* in Hosier-Lane neere *Smithfield*; and in Copper by Master *Elias Allen*, at his house ouer against Saint Clements Church without Temple-bar. VWhereupon I conclude, that the attaining of these excellent Arts, is now farre easier, then at any time in former ages they haue beene. And so for this time I bid thee farewell.

Thine G. *Gilden.*

A Prognostication.

A Briefe Declaration of the disposition of the foure Quarters of
this yeare, 1622.

Of Winter.

VWinter, the first Quarter Astronomi-
call, began the last yere the 12. day
of December, when the arch-flame of light,
being in his greatest digression from the Equa-
tor to the South, and scited in the Tropicall
point of Capricorne, bringeth diuers impedi-
ments euident in Nature, which bereaueth our
Septentrionall parts of the heate and vigoz
wherewith at other times the Sunne being nee-
rer, and more eleuated, doth preserve and cherish
the Elements, and all things composed of them,
whether vegetable, or sensitiue.

So as now commeth cold, and darknesse to
vs, on this Northerne part of the Equator:
But the most pleasant, and comfortable time
of Summer to the Inhabitants neere the
South pole: viz. Noua Guinea, Chasdi, Terra
del Fuego, &c.

In this Winter quarter, it is good to drinke
little, and eate well: because at this time mans

Gilden. 1622

Stomach (being hot) is aptest to digest.

The diseases incident to this quarter, are pusses in the face, Leprosie, Tooth-ach, red spots, Feauers, Scabs, Fluxes of blood in the inferior parts, payne of the Eyes, Palsies, Gouts, &c.

Of the Spring.

The Spring (according to Astronomicall computation) beginneth, when the Sunne enters into the Dodecatemory of Aries, or point of interfection of the Ecliprick and Equator, whereupon are grounded the generall predictions of the whole yeare succedent, as the radicall, or genethliacall reuolution thereof, happening this present yeare 1622. on the 11 day of March, hauing then prouolued himselfe to the punctuall interfection of the vernal Equinox: by which equall vicissitude of night and day, the world, for that time hath the fruition of his splendent rayes most gratefull to the dwellers within the temperate Zone, as Europe is: but ouer feruent, and parching heate to the Inhabitants nere the line in the torride Zone, as the most part of Africa, & East Indyes, with the spicery Isles: and also New Spaine.

This Quarter is most comfortable of all the

A Prognostication.

yeare and of nature warme and moyst: Yet the ordinary diseases thereof are Leprosies, Red spots, Crotch, Feauers of blood, Patches, or Ulceres in the face, Small Pox, Ring-wormes; Falling sickness, Waynes in the throat, and necke, the Kings Cuilt, Wenns, greifes in the shoulders and armes &c.

Of Summer.

Vhereas the condition of action, doth necessarily adde force of operation to all naturall agents: and as it commeth to passe in Winter, that by reason of the Sunnes remote position, that his continuance above the Horizon is shortest, and his absence under the same longest; thereby causing the shortest daies and longest nights; So now in Summer, which Quarter beginneth when faire Phœbus having arrived to the highest pitch of elevation in our Horizon; by his farthest obliquation to the North, he produceth the longest day, and the shortest night in the yeare, which will happen on the 21. day of Iune.

This Quarter is hot & dry in Nature, & doth so accordingly alter the humors in mans body.

The Exantheses arising to the nature thereof, are greifes and torments about the breast, ribbes

Gilden. 1622.

ribbes, and spleene: Pusches, Leprosies, and diseases of the face (as in the Spring,) bleared and soze eyes, with other impediments therein; the Pleuresie, Cough, Heart and Stomach-aking; sozrow, berations, Feauers of blood, Apoplexies, Pestilence: the Jaundise, paine in the belly and secret parts, with other infirmities proceeding of melancholy.

Of Autumne.

The Sunne hauing entred into Libra, the other Equinoctiall Dodecatemory, maketh equall Arches of Sun-shine on the surface of this Globe of mortality; producing a second Spring, which falleth out this yere 1622. vpon the 13. day of September.

And this Quarter is by nature cold and dry. The diseases thereof are properly paines in the backe, darknesse of sight, retention of brine, fluxes of blood, paynes in the priuy parts, with infirmities in the face; also the Canker, Fissuloes, Emproys, the stone and gravell, Feauers of blood, and impediments in the eyes.

A Prognostication.

Of the Eclipses of this present
yeere, 1622.

Of the two great Lights of Heauen, viz. the Sunne and Moone, wil there be no Eclipse visible in this our Horison this yere; yet in other places of the Earth will be seene two Eclipses of the Sunne.

The first whereof will happen vpon the 10. day of May, (according to our account here in England) and will be visible in the remotest part of Occidentall Affrica, and other Ilands; as the Isles of Saint Luke, Saint Nicholas, and Saint Anthony, &c.

The second Eclipse of the Sunne will be held both great and terrible vpon the 23. day of October (according to the old stile) in the East-Indies, and other Countreyes adiacent thereunto.

Of the effects whereof (seeing neyther of them will be visible in our Horison) as also of the weathers particular dispose, and other predictions; because they are so vulgarly taxed, I hold it needlesse to write any particulars of them.

The

Gilden. 1622.

The disposition of the Ayre in more
particular.

FOrasmuch as I haue noted the Aspects of
the Moone & Planets amongst themselves,
agaist euery day of the Moneth, in these 12.
Columes following: I thought it would be no
lesse conuenient, then if setting downe the daily
dispose of the weather, I shall by a Table im-
mediately following the said Columes, shew
how by those Aspects, you may know the alte-
ration of the weather, whereby you may con-
ceine, that if by the Table alone, you may come
nere to know the change of the weather; the
whole Art is not so vaine, as it is accounted, but
auayleth to the knowledge of much truth.

The

The Aspects of the Moone and the rest of the Planets.

Gilden. 1622.

Note that every King beganne his raigne the same
time that the next precedent King ended his.

The vse of the former Table.

If you desire to know how long it is since the begin-
ning of the raigne of any King, looke how long it is
since the ending of the precedent King, and you shall
finde your request.

Example.

I would know when King Henry the eight beganne
his raigne, how long he raigned, & also now how long
it is since the ending of his raigne.

First I finde out his name among the Kings
names, and looking along the row towards the right
hand, you shall find that he began his raign in the year
1509. the 22. of Aprill: and vnder the Title (The time
they raigned) there is 37 yeares. And in Ianuary the
28. (vnder the title of The time since they raigned) you
shall finde 75. And so long it is since he died.

A Prognostication.

A Table to know when the moone will be South for euery day in the yeare. **The vse of this Table.**

Dayes.	Hour	Min.	Dayes.
1	12	48	16
2	1	36	17
3	2	24	18
4	3	12	19
5	4	0	20
6	4	48	21
7	5	36	22
8	6	24	23
9	7	12	24
10	8	0	25
11	8	48	26
12	9	36	27
13	10	24	28
14	11	12	29
15	12	0	30

Note that the Colu-
me of dayes on the left
hand, is the age of ☾
before the full: And
the Colu-
me of dayes
on the right syde from
16 to 30 is the age of
☾ after the full. And
the middle Colu-
me of
houres and minutes
is the time of her com-
ming to the South.
Then the age of ☾ be-
ing found in the Cal-
lender (that is) how
many dayes is past
from the time of her
change; therewith en-
ter this Table. And
hauing found it in the

From the chage From the full to first Colu-
to the full, the change, the hand, if it be before the
moone comes to moone comes to full Moone, or to the
the South, after- the South be- right hand; if it be after
noone. fore noone. the full ☾. You shall
haue in the middle Colu-
me her comming to the South,
before or after, as is noted in the foot of the Table.

As for Example.

The 14 day of Ianuary the Moone is 13 dayes old,
wherewith entring this Table in the first Colu-
me to the left hand, ouer against it I finde 10 h. 24 shewing me her
comming to South to be at 24 minutes past 10 a clock at
night,

To

Gilden. 1622.

To knowe the houre of the night by the
Moone on a Sunne Diall.

The time of the moones comming to South, being found
in the former table, in manner aforesaid, looke on a sunne
dyall, vpon what houre before or after 12 on the diall the
Moones shadow falleth, for so many houers it is, before
or after the moones comming to the South.

Example.

I finde the Moone comming to South the aforesaid 14
day of January at 10 a clocke, and 24 minuts at night:
Then looking on a sunne Dyall, I finde her shadow to
fall on the third houre after twelue on the Dyall:
whereupon I conclude it is the houres, and 24 minuts
after 10 a clocke, her comming to the South. And there-
fore one a clocke and 24 minuts in the morning.

Astrologicall Elections for Pyficke and
Chirurgery, depending on the place and
course of the Moone.

VVhen the body is filled with naughty and super-
fluous humours, it is conuenient for the to
draw blood, so the heauens consent therunto, and the
age agree therewith, which being not circumspectly
weighed, it may bee most dangerous to the Patient
whereof no vnderstanding man is ignorant, but when
necessity begeth.

C

Is

To

A Prognostication.

As for the Pestilence, Plurisy, Phrensie, &c. Then though the Heavens denie, yet a veine is speedily to be opened; Ad ægri salutem. This considered; Of medicines, some be purgative, some comfortive, and others in the meane betwixt both.

Medicines purgative, be either solvendo or leniendo. In the first the ☿ must be in ♄ M. or X. For the other, the ☾ must be taken when she worketh more in moistnesse then drynesse, being in △ or * with ♄. And you must take heede, in the houre of giving the medicine, least the ☿ have any aspect with ♄, for he cometh leth the humors, making the medicine worke little.

Likewise, let her be free from any aspect with ♃: for he is the giver of life, the helper and comforter of the vertues, so that the medicine can but weakly expell the humors, making the body affected with an evil quality. Furthermore, in all purgative medicines, observe these ensuing rules: for in the administration of physicke, are chiefly to be respected three things. Viz. The Time. The Age. And the manner of Administration.

For the time of the yeere.

For the election of Time, consideration is to be had, that it may not be in extremity either of heat or cold, And therefore Hipocrat. part. 6. and 46. Aphoril. saith; That the Spring and Autumn are best for physicke: and Summer and Winter bad, and to be used but upon necessity. For in summer the humors boyle, by reason of heate, causing great annoyance to mens bodies: yet if necessity urge to take physicke in summer, it is best to take it by vomite. And in Winter (if necessity require) by purgation.

For the time of the Moneth.

Let not blood three dayes before and after the conjunction of the Moone, and ♄. The like of the conjunction

tionation of J and J . Neither let blood Q and J being in coniunction, whilst Q is combust.

Let not blood the day before and after the full of the moone: the like obserue the moone being in coniunction with J or Mars.

But the moone in any Aspect with J or Q , or in a K or Δ with Q or J , produceth a very fit time to let blood.

The time of the day.

The morning fasting is best, or in the evening after perfect digestion, with this proviso; that the ayre be temperate, and the wind not in the South.

For the Age.

Concerning the age, you are to understand, that decrepits old age, and young infants are unfit to haue physicke administred vnto them, or such as bee vnder 14 yeares of age, and more then 56 yeares old, or such as bee exceeding fat, or very leane. And it is also dangerous for a young man to take much physicke, for as a learned Physitian saith, He that taketh much physicke when hee is young, will much repent it when he is old.

For the age to let blood.

In youth, from the change to the first quarter.
In middle age, from the first quarter to the full.
In elder age, from the full to the last quarter.
In old age, from the last quarter to the change.
And after bleeding ble no violent exercise, no sleeping, no venery, or gluttony.

The manner of Administration.

For the manner of Physickes Administration, Albu-
mazars opinion is, That the fittest times for Purga-
tions

A Prognohication.

tions are to be elected, according to the motion of the Moone in watry signes, as ♉, ♊, and ♋.

Others hold opinion that the first halfe of Libra and Aquarius are fit times: and when the Moone is hold of course, it is indifferent to take purgatiue medicines.

♌ in ♉ in ♀ } not combust, is good to auoid cho } with
 * 02 Δ a = } ☉ } is good to purge phleme: (ler } electu-
 spect of } ♋ } good to expell melancholy: } aries.

♌ in ♊ in ♀ } } } good to purge } chollier } with poti-
 * 02 Δ a = } ☉ } } phlegme } phlegme } ons.
 spect of } ♋ } } melancholy }

♌ in ♋ in ♀ } } } good to purge } chollier } with
 * 02 Δ a = } ☉ } } phleme } phleme } pills.
 spect of } ♋ } } melancholy }

♌ in ♌ in ♀ } } } good to purge } chollier } with any
 * 02 Δ a = } ☉ } } phlegme } phlegme } kind of
 spect of } ♋ } } melancholy } medicine.

But note that you must take that ♀ be not combust, and that the ☉ ☐ 02 ☽ of ♋ ♌, 02 ♌ either to the ♌, 02 betweene themselves, doe not hinder the operation of the physicke.

Neither let the Moone be in any of the signes that doe cheate the cradde, as ♋, ♌, ♍, for then the medicine will stay but a litle with the patient, causing him to vomit, vntlesse you intend to purge by vomiting.

Also in purging the melancholy, let not ♌ haue domi- nion, nor ♌ in purging the sanguine 02 the liuer, nor mars the cholericke, nor Luna the head, nor ♀ in purging the lungs.

The Moone being fortified, it is fit to purge the brain.

In the administration of Purgations, remember Haly his

Gilden. 1622.

his Comentary upon Ptolomy, who saith; That the humors from the change of the ☾ to the first quarter, and from the full to the last quarter, doe mooue from the inward parts of the body to the outward: And likewise from the first quarter to the opposition, and also from the last quarter to the change, they mooue from the outward parts to the inward.

Therefore in the first and third weekes of the Moone is best applying externall euacuations; and in the second and fourth weekes internall purgations.

How the vertues be corroborated.

The Vertues bee either vitall, animall, or naturall. The vitall vertues remaine in the heart, the animall in the braine, and the naturall in the liver.

The vitall vertues are governed of ☉ and ♃.

The animall of ☾ ♀ and ♀.

The naturall of ♃ and ♀.

Other vertues be also governed of the Planets, as the vertue Attractive is governed of ☉, the Digestive of ♃, the Retentive of ♀, the Expulsive of ☾.

Also the Signes thus governa the Vertues, ♈ rule the Attractive: ♊ and ♋ the digestive: ♉ and ♌ the Retentive: ♊ and ♌ the Expulsive.

Also the vertues bee ruled by the Planets thus, ☉ the well-spring of the vertues vitall, ☾ of the vertues Animall, ♀ of the Retentive, ♃ of the Augmentative, ☉ of the Attractive, ♀ of the Appetitive, and ♀ of the Imaginative.

Therefore when you would fortifie any of these vertues, fortifie the Planet signifying the same, and it is done.

In letting of blood you must know what persons are fit to bleede, and what not: and if they bee fit, how it is to be done.

A Prognostication.

with the patient inwardly for his complexion, and outwardly, for the time of the yeare, and the month, as aforesaid.

For Complexion.

For the Phlegmatick, let the \cap be in V , or ♊ or ♋ or draw blood. For the Melancholy in ♌ or ♍ or the Cholerick in ♎ or ♏ . And for the sanguine in any of the aforesaid.

The braccustomed are not to be Phlebotomized, least it breede some malady, unlesse necessity bidge it. And you must also haue respect to the strength of the person.

Certain Elections concerning Husbandry.

It is best to plant in the last quarter of the \cap , so that the \cap be not aspected by ♊ or ♋ or ♌ or ♍ .

Sow corne when \cap is in ♌

Fell timber for building, from Midsummer to Christmas, in the wane of the Moone.

Sell or libbe Cattell when the \cap is in V or ♋ or ♌ .

Remove trees the last quarter of the moone, betwene Whollantide, and Twelfside.

The later writers of Husbandry doe report, that the seedes of tender hearbes committed to the earth in an apt time, the moone being in her first quarter, doe moze speedily shoot vp, then otherwise, especially, being sown after showers of raine on sunny and warme places, with obseruation, that the winde bloweth not from the north, at the time of their sowing. And though the ancient writers of Husbandry haue prescribed proper moneths and dayes for the sowing of seedes; yet may every man obserue their owne rules, according to the nature of the place and aire, where they are to be sown: So that they consider also, that there be some seedes, that by nature doe spring vp faster then others.

Finis.
